

# Interactive Digestive System

To describe the functions of parts of the human digestive system

The diagram shows a human torso with the digestive system highlighted. Labels point to the following parts: Mouth, Salivary Gland, Esophagus, Stomach, Liver, Gallbladder, Pancreas, Small Intestine, Large Intestine, and Rectum. There are 14 empty boxes for labeling: one at the top, two on the left, two on the right, one below the mouth, one below the stomach, one below the small intestine, one below the large intestine, and one at the bottom.

Write the function of each body part on the worksheet. Cut out the flaps below and stick one over each function and write the name of that body part on the flap.
